

XTR100 4-Belt Even Flow Accumulator

Capable. Efficient. Gentle.

XTR100 4-belt Even Flow Accumulator in "first in, first out" configuration

Combining our deep knowledge of the fresh produce industry with rigorous engineering and quality manufacturing to build the best 4-belt even flow accumulator available: the XTR100.

Capable

Our XTR100 4-Belt EvenFlow Accumulator is a flexible machine, useful for any gentle accumulation and controlled release of your product. Packing bell peppers? We can integrate it with our **XTR200 Portal Dump** system to ensure that you have a flexible path from bin to sorter with no gaps in the product flow, keeping your sorting line constantly fed. Packing potatoes or citrus? The XTR100 4-Belt EvenFlow Accumulator is perfect to collect sorted products and manage the flow to packaging equipment, ensuring the packaging lines are running at maximum efficiency.

Efficient

The flexibility of the XTR100 4-Belt EvenFlow Accumulator means efficiency is built in. It is designed to be used with a telescoping conveyor, allowing you to deliver the product to multiple distribution points. A single XTR100 can feed product to multiple sorting lines, multiple packaging lines, or wherever you need a steady flow of product.

We build our XTR100 4-Belt EvenFlow Accumulator with your needs in mind. We can build it in customized dimensions to meet your requirements. We also offer it in two configurations: first in, first out and last in, first out. So, whether you need the freshest product out first or want to get product from the last bin onto the sorter quickly, the XTR100 4-Belt EvenFlow Accumulator will help keep you on track.

Gentle

The XTR100 4-Belt EvenFlow Accumulator has a holding capacity of between 5,000 and 6,000lbs, depending on the product. It is extremely gentle, using either a pintle-lined chute (FIFO) or an angled backstop to move product from the feeder line to the accumulator area without damaging it.

To maximize the efficiency of your lines, start with Exeter Engineering's XTR100 4-Belt EvenFlow Accumulator. Its high capacity and flexibility will gently get your product where it needs to be. And, like all our equipment, the XTR100 4-Belt EvenFlow Accumulator is built with long-term reliability in mind, keeping your lines operating optimally for years to come.

Common sense reliability and cutting-edge technology.

That's Exeter Engineering.

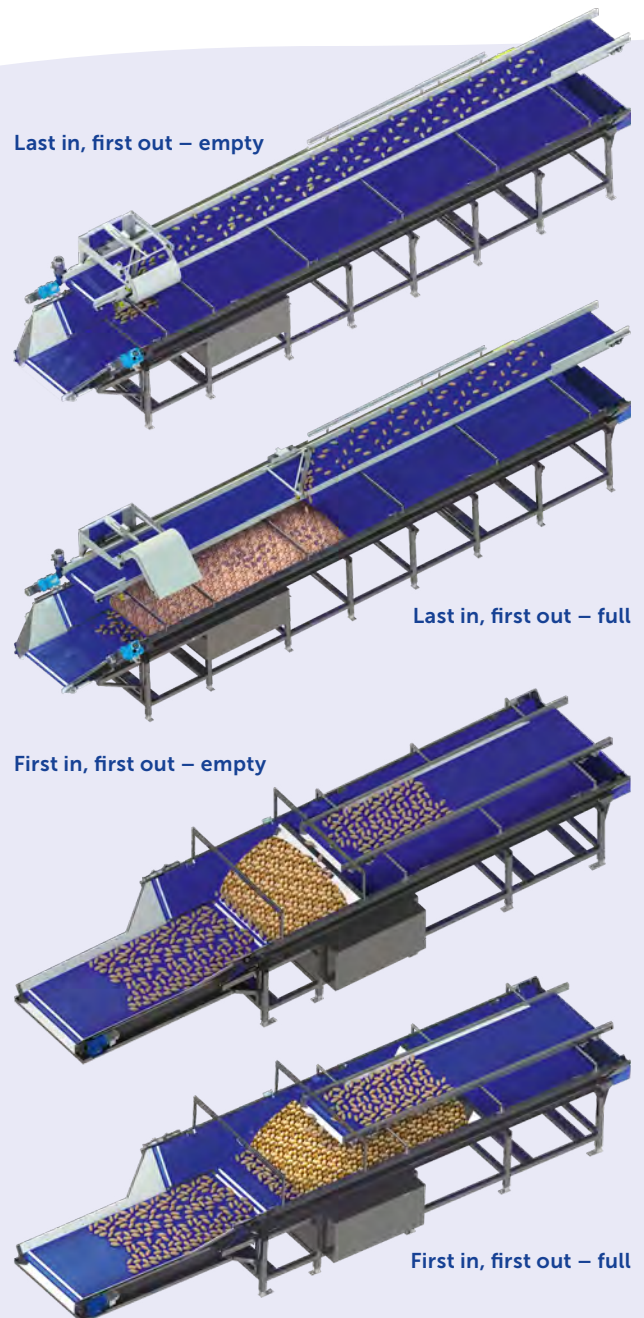

That's the XTR100 4-Belt Even Flow Accumulator.
