

# AccuCount Filler

Accurate. Flexible. Gentle.

See the AccuCount in action

AccuCount is an automatic carton filler that gives you a solution to a variety of problems.

## Accurate

AccuCount gives you single piece accuracy. Whether you're filling a large RPC unit or a smaller metric footprint container, AccuCount will give you reliable accuracy and a gentle touch. Many count fillers rely on measuring the diameter of your products to measure counts. That can lead to miscounts, due to varied diameters or irregular shaped products. AccuCount uses reliable sensor technology in protected housing to eliminate miscounts due to lighting problems, whether from outside light sources or ambient light.

## Gentle

AccuCount is designed to be gentler on your products while maintaining accuracy. The system uses a hopper design, allowing counted product to accumulate to the specified fill before releasing to the target carton. This protects the product by preventing awkward drops that can damage products and increase your losses.

## Flexible

AccuCount is fast. It's unique hopper design allows for filled cartons to be removed and replaced by empties as the product is counted. That means your line moves quickly and consistently. The AccuCount is capable of filling between 8 and 12 boxes per minute, while still protecting your product from damage. The intuitive, easy-to-use controls allow for even novice operators to set target counts and the number of containers. Adjustments to speed or count are easy to make. It also means that AccuCount will consistently save valuable time and your lines keep moving, increasing your bottom line.

Exeter Engineering offers a variety of accumulators — like the XTR100 4-Belt Even Flow Accumulator — that pair perfectly with AccuCount. We can also easily integrate the AccuCount into existing packaging lines or build you entirely new packaging lines to meet your current and future needs. Like all our equipment, AccuCount is engineered and built to our exacting standards. Solid construction, simple design, intuitive software, and reliable parts mean your AccuCount will be a dependable partner for season after season.

**If you are looking for an carton filler with superior accuracy and a gentle touch, take a look at the AccuCount Filler, by Exeter Engineering.**

**Common sense reliability and cutting-edge technology.  
That's Exeter Engineering. That's the AccuCount Filler.**
