

XTR500 PORTAL DUMPER

Multi-talented. Gentle. Versatile.

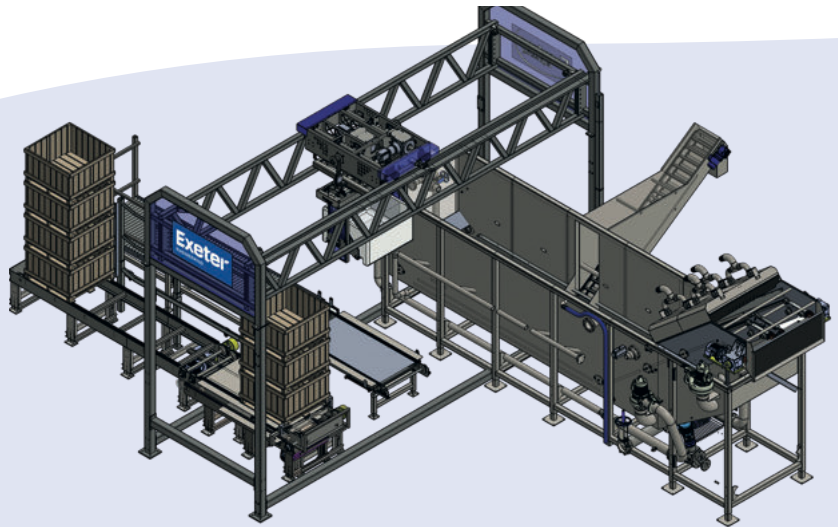

Our XTR500 Portal Dumpers are the most flexible, gentlest way to empty bins, ensuring that your operations are constantly running at maximum efficiency.

Multi-talented

The XTR500 Portal Dumper is a workhorse, forming an integral part of your operations. The XTR500 Portal Dumper can unstack, empty, and re-stack product bins up to 4 bins high. It does this in fraction of the footprint needed for a typical line containing an un-stacker, bin dumper, and re-stacker . . . and it costs 40% less. And you can even use the XTR500 Portal Dumper to submerge your product during the washing process!

Gentle

Precision engineering ensures that your product is always treated gently by the XTR500 Portal Dumper, giving you piece of mind and preserving the quality and safety of your produce. Other portal dumpers lack the same precision or are constructed with cheaper materials and lighter specifications. In contrast, the XTR500 Portal Dumper is constructed in heavy gauge steel, so it will continue to treat your product gently, season after season.

Versatile

A single XTR500 Portal Dumper can unload bins at multiple dumping points, saving you the cost of multiple bin dumpers. That also means that your unloading processes will be continuous, as the XTR500 Portal Dumper moves from one stack of bins to the next. Optional control doors will give you the ability to further regulate product flow.

The XTR500 Portal Dumper is a simple piece of equipment that allows you to do many

things. Placed at the beginning of your line, the XTR500 Portal Dumper will move product directly from field bins, gently directing it onward in a steady flow, so your sorting operations have a constant feed of product. Placed at the end of the line, the XTR500 Portal Dumper will collect your processed product and move it precisely into your packaging operations, ensuring your operations' output remains high.

So if you're packing with 48" x 48" bins and you need a flexible, gentle solution to avoid batch filling and keep your lines steadily running, look no further than the X500 Portal Dumpers, by Exeter Engineering.

**Common sense reliability and cutting-edge technology.
That's Exeter Engineering. That's the XTR500 Portal Dumper.**
